

PL/pgSQL - SQL Procedural Language

Table of Contents

- **Overview**
 - Advantages of Using PL/pgSQL
 - Supported Argument and Result Data Types
- **Structure of PL/pgSQL**
- **Declarations**
 - Declaring Function Parameters
 - ALIAS
 - Copying Types
 - Row Types
 - Record Types
 - Collation of PL/pgSQL Variables
- **Expressions**
- **Basic Statements**
 - Assignment
 - Executing a Command With No Result
 - Executing a Query with a Single-row Result
 - Executing Dynamic Commands
 - Obtaining the Result Status
 - Doing Nothing At All
- **Control Structures**
 - Returning From a Function
 - Conditionals
 - Simple Loops
 - Looping Through Query Results
 - Looping Through Arrays
 - Trapping Errors
 - Obtaining Execution Location Information
- **Cursors**
 - Declaring Cursor Variables
 - Opening Cursors
 - Using Cursors
 - Looping Through a Cursor's Result
- **Errors and Messages**
 - Reporting Errors and Messages
 - Checking Assertions
- **Trigger Procedures**
 - Triggers on Data Changes
 - Triggers on Events
- **PL/pgSQL Under the Hood**
 - Variable Substitution
 - Plan Caching
- **Tips for Developing in PL/pgSQL**
 - Handling of Quotation Marks
 - Additional Compile-time Checks
- **Porting from Oracle PL/SQL**
